

EXPERIMENT-1

Creating a virtual machine

EXPERIMENT - 1

9/1/23
MBS

1. create a virtual machine

Aim :- Create virtual machine by
installing oracle virtual box
on windows

Procedure :-

1. Install oracle virtual box windows installer
2. To create virtual machine click machine from oracle VM virtual box manager
3. Then click new
Give a specific name to VM
and if necessary ISO image
also (optional)
4. To create VM we have to set hardware - we can modify VM's hardware by changing amount of RAM
5. Next to add virtual hard disk
If we want we can add or
we can also create VM without
virtual hard disk.
6. Now you get summary of
virtual machine
 - machine name & OS type
 - It's hardware
 - Disk.Now click finish

Result:-

virtual machine is created.
It gives general system, display,
storage, audio, USB, network,
shared folder & description
information.
